

NATIONAL ASSOCIATION FOR THE
PREVENTION OF TUBERCULOSIS

REPORT OF COUNCIL 1936

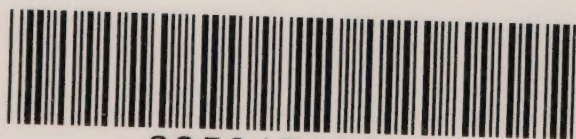

THE CRUSADERS' EMBLEM AND ITS HISTORY

The use of the red cross with the double arms stretches back into Christian usage of the Middle Ages, when it was the emblem of the Second Crusade. It was employed by the celebrated Godefroy de Bouillion, who placed it on his standard at the capture of Jerusalem from the Infidel in 1099, and later had it incorporated in the arms of the House of Lorraine.

The use of this cross as an international emblem in the crusade against Tuberculosis dates from 1902, when it was recognised at the International Conference at Berlin.

Just as the great crusading movements of the Middle Ages unified Europe in the presence of a common enemy, this cross expresses the spirit of all countries of determined warfare upon Tuberculosis, the greatest plague that has ever devastated humanity.

Versions in the detailed form of the cross having crept in during the last thirty years, it has been decided to standardise its shape, and the representation on the cover of this report is that now adopted throughout the world.

OBJECT, MEMBERSHIP, AND METHODS OF THE ASSOCIATION

1. OBJECT.—The prevention of tuberculosis.

2. MEMBERSHIP.—The Association consists of Ordinary and of Life Members. The contribution of Ordinary Members is 5s. annually. Those who subscribe annually a sum of not less than one guinea are enrolled as Subscribing Members. Life Members give a donation of five guineas.

3. METHODS.—

I. The education of public opinion and the stimulation of individual initiative by means of—

- (a) A Central Office for the collection and distribution of information as to modes of diffusion of tuberculosis and measures of prevention.
- (b) The circulation of pamphlets and leaflets setting forth in plain language the result of scientific investigations of the above points.
- (c) Public lectures by men approved by the Council. Addresses at congresses and other public gatherings.
- (d) Co-operation with other societies having for their object the promotion of public health.
- (e) Co-operation with the Press.
- (f) Periodical congresses and the issue of an annual report.
- (g) The promotion of the establishment of open-air sanatoria for tuberculous patients.

II. The influencing of Parliament, County Councils, Health Authorities, Chambers of Agriculture, and other public and voluntary bodies on matters relating to the prevention of tuberculosis.

III. The establishment throughout the Country of local branches of the Association. Secretaries of branches are supplied with all literature at cost price.

COUNCIL'S REPORT

To the 38th Annual General Meeting of Members, to be held in the Physics Classroom of the University of Bristol, on Friday, July 2, 1937, at 4-30 p.m.

HIS MAJESTY KING GEORGE VI

In their report for the previous year, the Council recorded the passing of our late beloved sovereign King George V, and the loyal Address tendered by the Council to His Majesty King Edward VIII, who for many years had been President of the Association. His Majesty was graciously pleased to grant His Royal Patronage to the Association.

On the accession of King George VI, the Council, on behalf of the Association, tendered the following loyal Address to His Majesty:—

“To the King’s Most Excellent Majesty.

“May it please Your Majesty,

“We, the Chairman, Vice-Chairman and Council representing the National Association for the Prevention of Tuberculosis beg humbly to tender to Your Majesty the assurance of our allegiance and devotion.

“We desire, likewise, to offer our most respectful homage to your Majesty’s Royal Consort, Queen Elizabeth, whose graciousness has won the hearts of your people.

“We fervently pray that your Majesties’ reign over a happy and united Empire may be long and prosperous.”

Later in the year King George signified his willingness to become Patron of the Association.

PRESIDENTSHIP

The Council are happy to announce that His Royal Highness the Duke of Kent has been pleased to become President of the Association.

PRESENT POSITION OF TUBERCULOSIS—GENERAL STATEMENT

The Anti-Tuberculosis campaign continues to make gratifying

progress on every front. The result is shown broadly in the further steady fall in the death-rate in the various divisions of the Kingdom.

The following comparative figures will be read with interest:—

DEATH RATE FROM TUBERCULOSIS (ALL FORMS) per 100,000 population.					England and Wales.		Scotland.	
					1885	1935	1885	1935
All forms	245	69	282	74
Pulmonary Tuberculosis	186	55	208	57

The figures for 1935 are the lowest on record.

EXTENSION OF NATIONAL HEALTH INSURANCE

At the Conference in 1936 a resolution was passed requesting the Council to enquire into the question of scholars who, on leaving school at the age of 14, cease to have the benefits of regular medical inspection until they become eligible for National Health Insurance at the age of 16. The Council have long deplored this interval, during which many adolescent boys and girls fall into ill-health, with no certainty of obtaining proper medical supervision. This deficiency must have a bearing on the serious incidence of tuberculosis in the period.

The Government, as a result, no doubt, of numerous representations made to them by various sections of opinion, including this Association, have now decided to introduce a change in the law, which will be noted with satisfaction by all interested in tuberculosis.

EDUCATIONAL PROPAGANDA

The broader education of the Community in matters of health is having its effect. The Association may justly claim that, in the past, the campaign against tuberculosis in which faulty environment plays such a big part, has contributed much to enlightenment. Propaganda is still necessary to dispel the fatalism which surrounds the disease, to encourage proper use

of our dispensaries and hospitals, to meet the social needs of the tuberculous family—all these demand more and more active instruction. We need to convince every member of the community that the eradication of tuberculosis is his own affair. This can be done in such a way as to remove unreasoning panic and enlarge sane comprehension. Tuberculosis is a disease to which all are liable, and from which the great majority escape. We need to teach that, given time and the right attitude of mind, complete immunity is possible; and we have to show the way in which it can be achieved.

The Medical Commissioner has given lectures and cinema film demonstrations in many parts of the country. The list in the Appendix, will show the extent of his activity. As before, efforts have been made to co-operate with the statutory tuberculosis authorities, and the leading voluntary organisations.

It is sometimes said that the mere concentration on Tuberculosis will induce morbid thoughts and make people even more afraid. This shallow observation is not borne out by experience at the Association's meetings. Questions are asked by the audience, points are discussed, and it is possible to make a definite impression upon the average person, who may never have given the matter much thought. Conviction is the first stage towards action, and Propaganda is the art of arousing an attitude of expectant interest which leads to conviction.

THE WORK OF THE NURSE COMMISSIONERS

The happy inspiration which led to the Association's enterprise, in co-operation with other bodies in Northern Scotland, continues to have good results. The Scottish Branch of the British Red Cross Association and of the Queen's Institute of District Nursing, with the Royal Victoria Hospital Tuberculosis Trust, have continued their support, and Miss Weir and Miss Ormiston travel continuously through some of the most inaccessible parts of Great Britain. During the year, meetings have been held in the Island of Unst, the most northerly part of Great Britain, and throughout the Western Hebrides, as well as in the mainland parts of Inverness, Ross-shire and Caithness.

In these areas, unfortunately, tuberculosis is a great menace, particularly for the young men and women. The conditions of life are simple, but contact with the great cities brings its train of unhealthy changes. The two Nurse Commissioners seek to combat these influences in homes and schools by simple talks to mothers and children.

The contact with the village community is made through the District Nurse with the doctors and public health officials who are responsible for the medical services. The prevention of tuberculosis in its widest aspect—this is the theme of the Nurse Commissioners' work. Remarkable interest has been shown and fine reports are received from the clergymen, teachers and others who know the effect upon the community of these simple methods of propaganda.

During the year, Miss Weir has been provided with a motor car, which greatly helps her movements between the widely-scattered centres of population. She has also, now, the use of a portable cinema, which enables the Association's films to be shown without difficulty in the smallest places.

The work of the Nurse Commissioners is slow and difficult, but the interest they have managed to arouse shows that opinion is grateful for what is being done.

NEW SOUND FILM

During the summer, a valuable addition has been made to the film repertory of the Association by the production of a new sound film entitled "The Conquest of Tuberculosis." The film is intended to be shown to popular gatherings, and shows the tuberculous patient's progress from the Dispensary to the Sanatorium, and back home again with the gift of new life.

This film should help to show the public what measures are being taken to eradicate Tuberculosis, and should reassure those who fear to take the step of placing themselves in the hands of the Tuberculosis Officer.

THE EARLIEST PROPAGANDA FILM

In the year 1911, the first popular film on Tuberculosis, entitled, "The Story of John McNeil," was produced at the Royal Victoria Hospital, Edinburgh, by Dr. Halliday Sutherland. It shows in a graphic manner the organisation of the Dispensary Scheme, and was sent all over the world as an authoritative exposition of the system that later became adopted throughout Britain. In the course of years the film, though a fine piece of production for the circumstances of its time, became, through changes in fashion, less effective for the present-day cinema-goer. Its value as an historical document is undoubted, and the Association decided to present the negative for preservation in the historical library, to the Council of the British Film Institute.

PUBLICITY

The publicity campaign in the Press, which was inaugurated two years ago by the Council, had for its aim the following:—The education regarding tuberculosis of that large reading public which remains untouched by lectures and exhibitions; the spread of information regarding the Annual Conference, both by preliminary announcements concerning the subjects and speakers and by reports of the discussions and the lessons to be learnt from them; and generally regarding the purpose of the various activities of the National Association—and acquainting the public more particularly as to the significance of the Christmas Seal Sale, as a means of facilitating the development throughout the country of Tuberculosis Care Committees and allied work.

Thanks to the kind co-operation of a large section of the Press throughout the country, the scheme has been successfully carried out during the year. The Council are glad to have the opportunity of conveying to the Press their sense of indebtedness for the goodwill and helpful interest they have shown.

CARE COMMITTEES

Ever since the eradication of tuberculosis became a conscious purpose of the community, it has been clear that measures of medical aid, however satisfactory, could not produce the best

results unless social surroundings were taken into account. The care of the tuberculous family and the meeting of its many special problems that arise in consequence of the disease, form a noble and interesting activity. It is now, by Statute, one of the obligations of those bodies which provide Dispensary Services.

The National Association can look back to a period before the admirable tuberculosis work of the County and County Borough Councils was built up. It has always stood for those aims which members of the community wish to express as private individuals. Therefore, and without in the least disparaging the many excellent Care Committees which are conducted on other lines, the Association offers to help, and it grants affiliation to those bodies which have a preponderance of voluntary members. This work has progressed satisfactorily during the year, and there are now some ninety Committees in all parts of the country thus connected with the Association, and entitled to display the symbol of the double red cross.

Among the material advantages of affiliation is the privilege of the Christmas Seal Sale. Nearly all the bodies taking part in this have increased their receipts during the current year.

In March, in the Headquarters of the Association, a well-attended meeting was held at which members of Care Committees gathered for the exchange of experience and discussion on the objects of their work.

HANDBOOK OF TUBERCULOSIS SCHEMES

This invaluable publication has been issued every second year since 1916, and appears in a fresh edition in the summer, 1937. It gives a comprehensive view of the whole tuberculosis system in Great Britain and Ireland, both official and voluntary. The entries are grouped so as to reveal, for easy reference, the essential facts of tuberculosis work in any County or County Borough, and the Council believes that this publication will continue to be found indispensable to all active workers, and indeed to any member of the public who wishes to understand this country's programme against the disease. It furnishes an answer to critics who assert, without justification, that the authorities are inactive in the matter.

ACTIVITIES IN THE ISLAND OF CYPRUS

Attention was drawn in last year's report to the ravages of tuberculosis in the Island of Cyprus, and the formation there of an Anti-Tuberculosis League affiliated to the Association. Reference was also made to a contribution towards the establishment of the first Tuberculosis Dispensary on the Island and to the possibility, in co-operation with the local government authorities, of a comprehensive enquiry into the incidence of tuberculosis and the measures needed to control it.

The earlier part of 1936 was taken up with negotiations, and in November the Association sent out to Cyprus, as Medical Commissioner, a member of the Council in the person of Dr. Noel Bardswell, M.V.O., M.D., F.R.C.P., late Chief Tuberculosis Officer to the London County Council. Dr. Bardswell is accompanied by a Nurse Commissioner, Nurse Nita Jays, who, in addition to extensive experience of nursing, possesses a knowledge of Greek, which is the common language of the Island.

On arrival the Medical Commissioner was received by His Excellency the Governor of Cyprus, Sir Richmond Palmer, and had a most cordial welcome from the Cyprus Anti-Tuberculosis League. He has been able to start work with the co-operation of the leading health authorities.

Dr. Bardswell's first activity is a survey into the incidence of the disease and associated conditions. This is now in progress, and already numerous interesting features have come to light.

Conditions on the Island are in many respects oriental rather than of the West, and progress cannot be rapid. On the conclusion of the survey it is hoped that the Association and affiliated branch in Cyprus, in co-operation with the health officials, may be able to recommend a policy for the prevention and control of tuberculosis in the Island.

Photographs taken by Dr. Bardswell in Cyprus appear facing this page.

BURROW HILL COLONY

The Colony for tuberculous youths has been full throughout the year, and there is now a waiting list. The advantages of a long period of treatment for pulmonary cases of the disease have been long apparent, but it is less recognised that, in tuberculosis of the bones and joints, something more is needed than a lengthy period in sanatorium. The rehabilitation of such patients, after their treatment is virtually complete, is of supreme importance, and the methods in practice at Burrow Hill have justified the confidence originally shown in them. One may feel, indeed, that the educational advantages which these boys enjoy are far in advance of what might have been their lot in perfect health. The atmosphere of the Colony is that of a residential college, and in recreations and culture each boy has a chance of following his special interests. The Colony magazine has been started, and is produced entirely by the patients themselves.

A recent investigation reveals that, of those who have completed their training, over eighty per cent. are well and in employment. These figures show that the results of our Colony methods are not temporary in their effect, and for a tuberculous youth of the appropriate age, a period at Burrow Hill is, perhaps, the best means of becoming a healthy and useful member of society.

PHYSICAL TRAINING

The Government scheme for physical culture, recently inaugurated, will, in the next few years, greatly extend the opportunities for healthy recreation among those who have left school. The new playing fields, dedicated to the memory of King George V, will mean that more of the younger members of the community have the chance of healthy, open-air pastimes. These developments have a bearing on our national campaign to prevent tuberculosis; the Council are glad to know that the time has come when Parliament can turn its attention to the general aspects of national fitness, which have always been part of this Association's programme.

Schemes of physical training must be adapted to the capacity of the individual, and the Council trust that due attention will be paid to avoid the over-fatigue which, particularly in adolescence, is among the contributory causes of tuberculosis.

INTERIOR VIEW OF THE PERGOLA

FACTORY BILL, 1937

The Council are much interested in the proposals contained in the Factory Bill now before Parliament. When passed, this will secure long-desired improvements in the lighting and air space of factories, and the powers for medical inspection. From the point of view of Tuberculosis, it is gratifying to note that among women and young persons, and the definition includes both male and female workers, under the age of 18, the hours of employment are to be reduced, and overtime will become limited.

CHRISTMAS SEAL SALE

The scope of the Christmas Seal Sale continues to enlarge. Apart from the material benefits which accrue to those affiliated bodies who take it up energetically, the Council regard the propaganda connected each Christmas with the advertising and despatching of the Seals, as an important contribution to our campaign.

The privilege of selling Seals is granted only to those societies and committees which have satisfied the Council that they are of a predominantly voluntary character, and that their constitution links them up with other agencies dealing with the disease.

At the present time some forty-four Committees sell the Seals, and use the whole of their profits for the Care work in their own areas. It is hoped, by bringing into the scheme more and more properly constituted bodies, to form a valuable consensus of public opinion ready to help the tuberculous. The conditions of affiliation to the Association will be found in Appendix IV.

ANNUAL CONFERENCE, LONDON, 1936

In the spacious circular hall of the London County Council, the Twenty-Second Annual Conference of the Association was attended with great success, and once again the Association records its grateful appreciation of the facilities that were granted at County Hall.

The Conference was opened by the Minister of Health, the Rt. Hon. Sir Kingsley Wood, who reviewed his Department's work in the campaign against tuberculosis, and concluded by expressing his thanks for the support of the Association in the past and a hope for further helpful co-operation in the future.

The following subjects were discussed, and the Council have reason to think that the discussions have proved serviceable to those actively concerned with anti-tuberculosis work:—

“The Significance of the Examination of Contacts.”

“The Protection of the Adolescent and Young Adult from Tuberculosis.”

“The Need for Closer Co-operation between the Maternity and Child Welfare Service, the School Medical Service and the Tuberculosis Service.”

“Tubercle-Free Herds—Present Position and Policy.”

There was an exceptionally large attendance of delegates—more than five hundred—and the Council were happy to welcome among many representatives of the Empire, the President of the Jamaica Anti-Tuberculosis League and other representatives from affiliated bodies and other anti-tuberculosis organisations throughout the world. Thanks are due to all those who contributed to the success of the Conference by reading papers and taking part in the discussions.

The following countries were represented at the Conference:—

South Africa, New Zealand, Jamaica, Germany, U.S.A., Philippine Islands.

ANNUAL CONFERENCE, 1937

The Association is grateful for the invitation of the Corporation of the City of Bristol to hold the Twenty-Third Annual Conference in the city, and to the University Authorities in extending the hospitality of their beautiful premises.

The subjects of discussion are as follows, and the Council are confident of their appeal to the delegates:—

“Propaganda and Publicity Methods.”

“Preventive Institutions—with particular reference to Open-Air Schools.

(a) Environment. (b) Nutrition.”

“Equipment and Activities of a Tuberculosis Dispensary.”

INTERNATIONAL UNION AGAINST TUBERCULOSIS

In January the Secretary-General of the International Union telegraphed to the Chairman of the Council of the National Association expressing his Union's deep sorrow and sympathy at the death of King George.

The Xth Conference of the International Union, which was to have been held at Lisbon on the 7th to 10th July, 1936,

has unfortunately had to be postponed, owing to the Spanish War. It is hoped to hold the meeting in September, 1937.

Close collaboration has been maintained with the International Union. Enquiries made by the Union have been answered, specimen posters of the National Association have been sent, patients from abroad, referred by the International Union, have been helped to obtain suitable treatment, and many visitors introduced by the Union have been given facilities for the study of tuberculosis in this country.

The use of the Christmas Seal Sale is a happy international feature of tuberculosis work. The exchange of seals for 1936 took place under picturesque conditions last November, when the New York Anti-Tuberculosis Association sent over specimens of their seals by *R.M.S. Queen Mary*. These seals were received by our Seal Sale Organiser, Captain A. Thom, who interviewed the Commander and handed him, for safe keeping and transmission to America, a packet of the English National Association seals for the same year.

FINANCE

The finances of the Association are in a satisfactory condition. The future policy has been carefully considered, and the Council have sought ways of maintaining a proper balance between expansion and safeguarding of the funds entrusted to them. The work of the Association has been expanded in several directions, including the commission in Cyprus, and in this respect the Council believes itself justified in spending money. At the same time, since tuberculosis is still a grave problem for the community, care must be taken not to jeopardise the work that lies before the Association in the future.

MEMBERSHIP OF COUNCIL

Since the last Annual Meeting, the Council have accepted with great regret the resignations of Mr. R. H. Parry, F.R.C.S., and Dr. Noel Bardswell. Mr. Parry was a member for many years, and his valuable services were much appreciated, particularly by the staff and patients of Burrow Hill Colony, where Mr. Parry was a constant visitor.

Dr. Bardswell formally resigned membership in order to take up his appointment as Medical Commissioner in Cyprus.

The Council have great pleasure in welcoming to their number the following members, whose elections now fall to be confirmed:—

The Rt. Hon. LORD ROWALLAN, M.C., D.L.

Sir THOMAS STANTON, K.C.M.G., M.D., F.R.C.P.

Lord Rowallan brings a special knowledge of the problem of tuberculosis in cattle, and Sir Thomas Stanton, as Chief Medical Officer to the Colonial Office, will strengthen with other parts of the Empire the link that has been formed by the special enquiry in Cyprus.

The following six members are due to retire in accordance with Article 12 of the Constitution of the Association:—

Miss BROADBENT.

Sir PERCIVAL H.-S.-HARTLEY, C.V.O., M.D., F.R.C.P.

Mrs. ALBERT PAM, O.B.E., J.P.

NATHAN RAW, Esq., C.M.G., M.D.

R. A. YOUNG, Esq., C.B.E., M.D., F.R.C.P.

Sir WILLIAM YOUNGER, Bt., LL.D.,

who now offer themselves for re-election.

THE OFFICE OF SECRETARY

During the year the Association has lost the services of its Secretary, Miss Freda Stickland, who had been connected with its work for some thirty-eight years. All who recall her distinctive personality at Conferences and meetings will remember the zeal which she gave to everything connected with the subject. The Council record gratefully their indebtedness to her singular devotion and great powers of organisation. The Association likewise takes leave of Miss Burge, who worked in the Secretariat for fifteen years and who, since 1932, was Assistant Secretary. To both ladies in their retirement from active affairs will go, in fullest degree, the appreciative thanks of the Association for their long, ungrudging and fruitful labours.

Colonel G. G. Jolly, I.M.S., who was appointed to the office of Secretary-General in September, has returned to work with the Indian Medical Service, and has been succeeded by Lt.-Col. E. D. Caddell, M.C., M.B., R.A.M.C. (retd.). Dr. Harley Williams acted as Secretary-General for the early months of 1937.

By order of the Council,

R. W. PHILIP,
Chairman.

HARLEY WILLIAMS,
Acting Secretary-General.

National Association for the Prevention of Tuberculosis

AUDITORS' REPORT

We report that we have obtained all the information and explanations we have required, but that we have not seen the Title Deeds of the Land and Property at Burrow Hill Sanatorium Colony. We have examined the above Balance Sheet with the Books and Vouchers of the Association, and in our opinion it is properly drawn up so as to exhibit a true and correct view of the state of the Association's affairs, according to the best of our information and the explanations given to us, and as shown by the Books of the Association.

Dated this 21st day of April, 1937.

LORD, FOSTER & Co.,
Chartered Accountants,
37 Walbrook, London, E.C.4.

APPENDIX I

BURROW HILL SANATORIUM COLONY

(a) Report of Medical Superintendent, 1936

The year 1936 is of interest and significance inasmuch as it is the first year in our history during which we have maintained fully-occupied beds with a short waiting-list throughout the entire twelve months. Considering that our scheme was initiated as recently as 1929 this is relatively quick work. It takes some time for Local Authorities to appreciate the value of the new departure of an institution of work, but particularly if it involves the maintenance of patients in outside Institutions. Now, however, after seven years we can safely say that we have gained the confidence and support of Local Authorities to an extent which makes it certain that our scheme is accepted generally as a valuable contribution to the campaign against tuberculosis.

The demand upon our beds throughout the year led to the erection of two detached huts during the summer. Each of these huts has ample accommodation for two patients. The huts were constructed at the Colony, and are excellent examples of this type of building. Their neat appearance makes them quite an addition to the amenities of the Colony, and, if need be, one or two more of similar design could be erected without in any way spoiling the pleasant lay-out of the Institution.

During the year an increasingly large proportion of our admissions have been surgical patients. This circumstance reflects the fact that it is now more and more widely recognised that prolonged orthopædic treatment must be followed by some form of training and rehabilitation, if the money spent on surgical treatment is not to be largely wasted. A period devoted to rehabilitation following upon orthopædic treatment at once prolongs for these cases the duration of institutional observation and care, and also prepares the way for wage-earning. Our increased number of surgical admissions shows that the value of our clerical course for this type of patient is becoming more widely known. That course is the best clerical training available for the surgical case in this country, and it is indeed one of the most favourable opportunities for training of any kind open to the surgical cripple. We may confidently expect a still larger number of these patients to come our way when our work becomes still better known to the various Institutions and organisations concerned with the care and treatment of tuberculous cripples.

Our figures regarding the employment of ex-patients are better this year than ever they have been before. These figures, of course, relate only to such of our patients as have completed a course of training. It is obviously inevitable that a considerable portion of the patients admitted cannot complete a course of training, either on account of recrudescence of disease or because of all those difficulties which are conveniently summed up under the heading of temperamental unsuitability. In this latter connection it should be remembered that serious educational handicap due to very prolonged illness, commencing during school years, sometimes renders patients incapable of benefiting fully from our courses of instruction, though they may be quite

suitable subjects for training in all other respects. In considering the results of training in terms of employment, we take into account only patients who have completed a course of at least one year of education and training. Of these ex-patients no less than 87 per cent. are in employment. The most likely explanation of this increase in the number of patients finding employment is the improved conditions of trade in and around London. The development of new industries in that area has opened up many new avenues of employment for the young adult male, and our young patients from London and its environs have undoubtedly profited by these opportunities. A notable feature of this change for the better in industrial conditions in the south has been a demand for young male clerical workers.

Though a considerable number of those who are now in employment are not working in the occupation in which they have been trained, there can be no doubt that their training has helped them to obtain and to retain employment. The discipline, education, and training of the Colony are a splendid corrective to the defeatist attitude towards life and work which is often the result of prolonged sanatorium or hospital treatment. One is frequently struck by the way in which the young patient develops a sense of responsibility and acquires good working habits during a two-year period in residence. This aspect of our work has been commented upon by Tuberculosis Officers and Care Committee workers, who have done so much to help our old boys in finding employment. They are emphatic in declaring that, apart from the importance of our excellent training scheme in making these boys employable, their improved discipline and morale make them much more acceptable to employers.

I should like once again to compliment the instructors on the wonderful results they have achieved with very indifferent material. The tremendous physical handicaps in many cases make progress inevitably slow, and educational backwardness resulting from illness makes each case a special problem demanding individual attention. Our instructional staff has responded splendidly to these very severe demands upon their patience and perseverance. Eloquent proof of the value of their work is to be found in the examination results which are recorded in the statistical tables.

Appended to this report are more detailed statements regarding the work in the school, clerical training section, and horticultural department from the head instructors. From these reports it is evident not only that good work is being done in all these departments, but that the men who carry out this teaching and training are admirably qualified for their difficult tasks.

Report on the school year ended 31st October, 1936

NUMBERS

Throughout the year, the numbers of boys attending the school were very close to the maximum possible. The clericals were usually above their normal total (40), and the gardeners a little below their normal total (20).

EXAMINATIONS

The results of the examinations of the Royal Society of Arts and Pitman's Institute were kept up to the standards of previous years. The full School Certificate of the R.S.A. was not so popular as it was in past years, and candidates preferred to take single subjects in Elementary, Intermediate, and Advanced Stages. This is a more elastic arrangement than that of the School Certificate, which calls for seven or eight subjects, up to pass standard, at one time. By working for examinations in single subjects, each boy can arrange his work in a manner best suited to his past training, his abilities and his probable future requirements.

ROYAL SOCIETY OF ARTS EXAMINATIONS

				Advanced	Intermediate	Elementary
Papers taken	2	12	49
Number passed	2	9	45

These figures give an average of 89% successes. The number were distributed thus:—

					Papers taken	Number Passed
Advanced Arithmetic	2	2
Intermediate Arithmetic	5	5
„ Book-keeping	1	1
„ Commerce	1	—
„ English	3	3
„ Typewriting	2	—
Elementary Arithmetic	13	12
„ Book-keeping	4	4
„ Commerce	4	4
„ English	10	9
„ Geography	5	5
„ Typewriting	13	11

PITMAN'S SHORTHAND EXAMINATIONS

					Speed	Theory	Elementary
Papers taken	31	20	27
Number passed	24	14	20

Average successes in shorthand—74%.

SCHOOL OFFICE

The office in the school has fully justified its existence. It is occupied for one month at a time by one of the senior clericals, and much of the routine work of the school can safely be added to his duties. He takes charge of the stock and of the filing cabinet, which contains various records; he takes letters in shorthand, and types them and prepares them for the post. Books from the Surrey County Library are checked by him, exchanged, and later packed up and returned. He learns how to use the duplicating machine, and he is able to run off any number of test papers, circulars, and maps in a very short time. Much of the work entailed in the production of *The Burrovian* was done in the school office, and the occupants reached and maintained a very satisfactory standard.

“THE BURROVIAN”

The first magazine of Burrow Hill appeared last Easter. It is published quarterly, and the contents come chiefly from the boys themselves. Numbers

1 and 2, reproduced on the old duplicating machine, were poor, but the new machine turns out splendid work, and the Christmas Number of *The Burrovian* stood comparison with many other magazines of other sanatoria, both in the quality of the articles and in its make-up and appearance. Number 3 of *The Burrovian* was in great demand, and 175 copies were too few. The Easter number for 1937 will probably run to 250 copies. *The Burrovian* is planned, printed, and bound entirely in the school office.

SURREY COUNTY LIBRARY

With the generous help of the Surrey County Library, loans of expensive text-books, on a variety of topics, are made for three months. Many of the boys take advantage of this service, and borrow books to read for their studies, their hobbies, and their leisure.

It is pleasing to state that none of the books has been lost or returned in a damaged state. As many as 25 books are out at one time, and the prices of most of them are far beyond the reach of the average boy's pocket.

SCHOOL GARDENERS

The educational standard of the majority of the school gardeners remains low compared with that of the clericals. Most of the time is spent in the revision of the elementary things of school training. Usually a slow but consistent improvement can be seen. A few of the gardeners are clever enough to study ahead of their work, and these use the resources of the school to work for the examination of the Royal Horticultural Society.

(Signed) L. J. ALLEN,
Head Schoolmaster.

Report on the training of boys in horticulture at Burrow Hill Colony.

The course of training laid down by the Agricultural Department of the Surrey County Council covers all branches of the work. About forty boys yearly take this course, which is strictly adhered to by the instructors. Owing to the different standards of education amongst the boys it is not an easy task to find a common interest for them. This means classification, and special care and instruction for the backward class.

Boys on arriving at the Colony are, as a rule, of poor physique and often of difficult disposition, but the improvement is most marked after a few months. For instance, one can notice a more contented expression and an eagerness to work. This, of course, allows the instructors greater scope for training.

Twice yearly we set examinations for Senior and Junior classes, with prizes in each group. Every boy must take these examinations, and it is with great satisfaction that we find that most of the boys score over 50 per cent. of the total points available. We have, in recent years, turned out a number of boys

who have gained first-class Senior and Junior Certificates in the Royal Horticultural Society's general examination. This season we have two boys entered for the Senior, and six for the Junior examination, and all with very bright prospects of passing.

As in former years, the London County Council's Parks Committee have kindly allotted a number of posts to suitable London boys who have completed a course of training at the Colony. There is, of course, keenness to compete for these posts. Of the boys who have been placed in the London County Council's Parks in this way, most have passed the theoretical and practical examinations conducted by the Parks Department.

In addition to the splendid opening in the London County Council's Parks Department, employment has been found for several trainees in private situations, and reports of their work are very favourable. It is a pity that more of our boys cannot find such employment, as we instructors feel that a good many of our trainees have made, during their stay here, such progress, not only in their work but in educational and general well-being, that they would make very desirable employees in horticulture or similar work.

(Signed) F. E. MILLER,
Head Horticultural Instructor.

*Cuckfield Health Week	Rochdale Health Week
*Eltham Health Week	*St. Helens Health Week
Oldham Health Week	Sunderland Health Week
*Oxford Health Week	*Wrexham Health Week
*Portsmouth Health Week	

(b) Lectures and Cinematograph Demonstrations

The services of the Medical Commissioner are available to Health Authorities and other organisations to give lectures illustrated by films and slides. He can make arrangements for showing the films with one of the Association's portable projectors in almost any kind of hall, provided that there are no sky-lights. Black curtains which will obscure the windows of all but the largest halls are carried. The Association's technical assistant will erect the screen and apparatus and project the films and slides.

Those who wish to arrange for these lectures are asked to write to the Medical Commissioner giving, if possible, a range of suitable dates and particulars of the size of the hall and the approximate number and size of the windows that will have to be darkened (if the meeting is held in daylight hours).

If there is adequate publicity, the public will attend these lectures in satisfactory numbers. By means of posters, newspaper advertisements, window-cards, handbills and pulpit announcements it is possible to ensure that most members of any community will *know* of the meeting. If it be brought to their notice persistently a large number will attend.

Special gatherings of school children are usually held in the afternoon at about 3 o'clock, by permission of the Education Authority. Suitably chosen films which give the positive side of the subject and are free from disagreeable features are shown. These talks are very successful, and, apart from their intrinsic value, they help to advertise the public meeting in the evening.

No-one need fear that people will be afraid to attend a lecture on Tuberculosis. If it is well organised and adequately advertised there need be no doubt of its success.

HIRE OF CINEMATOGRAPH FILMS AND SLIDES

A full list of lantern slides and description of cinematograph films available for hire from the Association will be sent on application to the Medical Commissioner.

The Association's cinematograph films and slides cover the subject of the Prevention of Tuberculosis in its widest sense. There is material to illustrate lectures to medical students and nurses, as well as more homely talks to mothers and children.

The Association is anxious that these should be of the greatest possible value to anyone who is preparing a lecture on a special aspect of the subject.

The Medical Commissioner will, on request, offer suggestions as to the most suitable slides and films for any particular purpose, and will send type-written notes to form the basis of a lecture.

Cinematograph projectors taking films of standard and 16 mm. size can usually be obtained locally at a moderate charge. The current may be obtained from any electricity supply of over 50 volts, whether Direct or Alternating.

The films are non-inflammable, and may be shown without special licence or insurance in any hall.

Particulars of the cinematograph films which the Association lends are given in Appendix II (c). These are available in the usual standard size (35 mm.) and also in the sub-standard size (16 mm.). The list of films is being extended.

All the Association's films, in both standard and 16 mm. sizes, are made in non-inflammable material (aceto-cellulose), and may be shown in any hall without licence under the Cinematograph Acts.

(c) Price List of Publications, Films, and
Lantern Slides

CINEMATOGRAPH FILMS AVAILABLE FOR HIRE

All these films are printed on non-inflammable, slow-burning material, and may be used with safety (and without special licence) anywhere.

SILENT FILMS OF GENERAL INTEREST

	Size	Length Ft.	Time (minutes)	Charges Day	Charges Week
<i>Production of Tuberculin Tested Milk</i>					
Complete description of milking, bottling and distributing from tuberculin-tested cows. Particularly useful in rural districts.					
Descriptive of process, with instructive titles	16 mm.	350	10-12	5/-	£1
<i>A Stitch in Time</i>					
Descriptive of tuberculosis in a family: an adult case of phthisis infects a child—her dispensary and institutional treatment and final cure					
	35 mm.	1,500	20-30	10/-	£2
	16 mm.	680	15-20	5/-	£1
<i>Air and Sun</i>					
Taken in Switzerland, 4,000 ft. above sea-level. Children in open-air schools, and snowballing, without clothes					
	35 mm.	800	15-20	5/-	£1
	16 mm.	350	10-12	5/-	£1
<i>Consequences</i>					
How the young mother discovered tuberculosis and realised her personal problem: a plea for prompt diagnosis and treatment					
	35 mm.	1,000	15-20	10/-	£2
	16 mm.	480	10-12	5/-	£1
<i>Delay is Dangerous</i>					
The family man is faced with the discovery of his tuberculous condition. How he meets the difficulties and emerges triumphant					
	35 mm.	1,000	15-20	10/-	£2
	16 mm.	480	10-12	5/-	£1
<i>Makers of Men</i>					
The Burrow Hill (Surrey) Training Colony for boys aged 13-19: their cure and training amid delightful surroundings					
	16 mm.	700	15-20	5/-	£1
<i>Stand Up and . . . Breathe!</i>					
An attractive film taken in open-air scenes					
	16 mm.	400	12	5/-	£1
<i>Growing Up</i>					
A pleasant film describing some of the ways of protecting children against tuberculosis					
	16 mm.	320	8-10	5/-	£1
<i>The Wind and The Earth</i>					
A film illustrating tuberculosis work in a rural area					
	16 mm.	320	8-10	5/-	£1

SPECIAL SILENT FILMS (more suitable for exhibition to doctors, nurses, health visitors, teachers and other specialists)

	Size	Length Ft.	Time (minutes)	Charges Day Week
<i>How Tuberculosis is Caused</i>				
The infection and pathology of tuberculosis and the natural resistance of the body: respiration, circulation, etc. (with descriptions)				
	35 mm.	1,000	15-20	10/- £2
	16 mm.	480	10-12	5/- £1
<i>The Nurse's Part in Tuberculosis</i>				
How the nurse helps to prevent tuberculosis, and what she is to teach her patients; covers all points in the management of a tuberculous family				
	16 mm.	400	8-10	5/- £1
<i>A Day in an Open-air School</i>				
Describes preventive measures for tuberculous "contacts"; the influence of open-air, nutrition and sunlight				
	35 mm.	1,000	15-20	10/- £2
	16 mm.	480	15-20	5/- £1

SOUND FILMS

<i>Stand Up and . . . Breathe!</i>				
An attractive film taken in open-air scenes ..				
	35 mm.	1,000	13	10/- £2/-/-
	16 mm.	400	12	7/6 £1/10/-
<i>Contacts</i>				
Produced in the University of Minnesota, U.S.A., by the Hennepin County Tuberculosis Association. An attractive film showing the detection of Tuberculosis in a family by the use of the Mantoux test, and the preventive measures instituted in consequence				
	16 mm.	722	20	7/6 £1/10/-

HIRE OF LANTERN SLIDES

Per 30 slides per Lecture, 3s. od. plus carriage.

Any person wishing to hire a collection of slides may select from the list, which may be obtained on application. Slides available include the following groups:

1. Statistics.
2. Physiology and Pathology.
3. Tuberculosis of the Bones and Joints (including treatment at various institutions, tuberculosis and milk, etc.)
4. Sanatorium and Colony Life (illustrated by activities at several institutions).
5. "The Need for Fresh Air" (useful for simple popular instruction).
6. Open Air Schools (illustrated by schools in various parts of the country).
7. Historical (pioneers of Medicine and Public Health throughout the ages).

LEAFLETS

Local Authorities can have particulars of their Tuberculosis Dispensary and other Services overprinted on these leaflets.

Charge for overprinting leaflets:

100 copies, 11/-; 500 copies, 14/-; 1,000 copies, 18/-; per extra 1,000 at same time 8/-.

	Price (post free)
1. The Conquest of Tuberculosis	<div> 100 .. 2/6 500 .. 10/- 1,000 .. £1 </div>

APPENDIX IV

CONDITIONS FOR AFFILIATION OF OTHER BODIES TO THE NATIONAL ASSOCIATION

1. The Council of the National Association desire to extend widely among suitably constituted bodies dealing with tuberculosis the privilege of affiliation, both in the interests of these bodies themselves, and in order to emphasize the national character of anti-tuberculosis work.

2. Any Voluntary Society or Committee whose principal aim is the eradication of tuberculosis, and whose practical work to that end is approved by the Council of the National Association, shall be eligible for affiliation.

3. This definition includes voluntary bodies which are concerned in the treatment of individual cases and the protection of their families; such as Tuberculosis Dispensaries, Care Committees, Sanatoria, Hospitals, Colonies, Settlements, Open-air Schools, Workshops and Classes for the training and employment of tuberculous persons, agencies for furthering the eradication of tuberculosis among cattle and the sale of milk from tuberculin-tested herds; provided that in each case they are approved by the Council.

4. The privileges of affiliation are as follows:

(1) Affiliated societies have the right to use the double red cross sign, and are requested to print it on reports, notepaper, etc. A block of the cross is supplied free. It is also requested that societies shall add after their names on reports, paper, etc., the words "affiliated to the National Association for the Prevention of Tuberculosis."

(2) Literature is supplied at cost price.

(3) Individual cases requiring assistance which, owing to any special circumstances, cannot be dealt with adequately by the health authorities or other local agencies, and which are recommended by an affiliated society, receive the special consideration of the Association's Grants Committee.

(4) Affiliated societies have the right to send one representative each to the Association's Annual Conference without payment of a fee.

(5) The Council of the National Association are always ready to give advice or information.

There is no fee for affiliation.

5. Affiliation may, with the further sanction of the Council, carry with it the right to participate in the Christmas Seal Sale for Tuberculosis.

6. The privilege of affiliation shall be continued from year to year, and at any time the Council of the National Association shall have the right to withdraw the privilege, if the Constitution or Objects of the affiliated society are changed, or if, in the opinion of the Council, the work of the affiliated body does not reach the standard considered by the Council to be adequate. The affiliated society shall send a copy of its Annual Report and Balance Sheet to the Association.

7. Before granting affiliation, the Council shall consider the Constitution and Objects of the body seeking the privilege, and its latest Report, audited Balance Sheet, and other evidence of work accomplished.

APPENDIX V

MODEL CONSTITUTION FOR A COUNTY OR COUNTY BOROUGH VOLUNTARY TUBERCULOSIS CARE ASSOCIATION

1. This shall be styled the — Voluntary County Tuberculosis Care Association, affiliated to the National Association for the Prevention of Tuberculosis, and shall consist of representatives from the Tuberculosis Care Committees in the County and other interested persons.

2. Its object shall be the continuous care of patients suffering from Tuberculosis, and their families. Its activities may include the following:—

(a) To ensure that every person suffering from Tuberculosis in the county area is under the supervision of the local Tuberculosis Dispensary.

(b) To provide, where necessary and possible, improved housing accommodation and means of livelihood for tuberculous persons and their families.

(c) To provide means of occupation, open-air shelters, bedding, clothing, books, and other means of improving the patients' mental and physical environment.

(d) To provide, in Holiday and Convalescent Homes, accommodation for children and others in contact with cases of tuberculosis.

(e) To provide means whereby patients in sanatoriums can be visited by their relatives.

(f) To provide extra nourishment for patients suffering from tuberculosis, and their families.

(g) To set up workshops and handicraft classes for tuberculous persons.

(h) To form fresh Voluntary Care Committees or area sub-Committees where necessary to carry out the above objects in various parts of the County.

In carrying out the above activities, full contact shall be made with the appropriate official and voluntary agencies.

The Association shall exist to promote the above activities either by assistance to existing Care Committees, the promotion of new Care Committees, or by direct administrative action.

3. The Association shall consist of — representatives from each Care Committee in the area.

4. The Office Bearers shall consist of a Chairman, Vice-Chairman, Secretary, Treasurer, and — members. In addition, — members of the County Council of — may be co-opted.

5. The County Medical Officer of Health and County Tuberculosis Officers shall be members *ex officio*.

6. The Committee shall apply for recognition to the County Council of — in order to become eligible to receive grants available for the care of persons suffering from tuberculosis.

7. An Executive Committee of the Association may be formed, consisting of the office-bearers, the Tuberculosis Officers and — members.

8. Any three members of the Committee resident in a particular part of the County may be formed into an Area Sub-Committee for that area, with power to co-opt two persons to their number, and such powers of action as the County Committee shall see fit.

9. The Association shall meet four times yearly in the months of January, May, July and November.

10. If, on the formation of the County Tuberculosis Care Association, there exist other local Tuberculosis Care Committees or bodies undertaking Tuberculosis Care Work for a part of the County less than the whole, but not affiliated to the National Association for the Prevention of Tuberculosis, the County Association shall agree to give them representation on its membership, provided the constitution and objects of such local Associations are approved by the National Association for the Prevention of Tuberculosis.

Where such existing local Care Committees or other bodies undertaking Tuberculosis Care Work are affiliated to the National Association for the Prevention of Tuberculosis, they shall be admitted to membership of the County Association.

11. New bodies proposing to undertake Tuberculosis Care Work in the County may be given representation on the County Association provided that their Constitution and objects are approved by the County Association and by the National Association for the Prevention of Tuberculosis.

12. The County Association shall publish an Annual Report and Balance Sheet.

13. The Committee shall apply annually to the National Association for the Prevention of Tuberculosis for participation in the benefits of the Seal Sale.

14. All matters of doubt in the working of the County Care Association shall be referred to the Council of the National Association for the Prevention of Tuberculosis.
